| Server Types - Minimum Recommended |

---

### Suite

**V11 Platform Specifications that are supported**

- Windows Virtual Desktop (WVD Fall 2019 Release)
- Nutanix XiFrame
- Azure Virtual Apps Essentials

**Deployment Tools**

- SCCM 2016 (version 1606)
- SCCM 2012 R2 SP1

**Built With**

- FORTRAN 2017

**Desktop Types - Minimum Recommended**

- **Type I:**
  - Computer & processor: Intel Core-i5 family or faster
  - Memory (RAM): 16 gigabytes (GB) RAM
  - Hard Disk: 120 gigabytes (GB) available
  - Monitor: Graphics hardware acceleration requires a DirectX10 graphics card and a 1280 x 1024 or higher resolution monitor
  - Network: 100MB/Sec

- **Type II:**
  - Computer & processor: Intel Core-i5 family or faster
  - Memory (RAM): 250 gigabytes (GB) RAM
  - Hard Disk: 250 gigabytes (GB) available
  - Monitor: Graphics hardware acceleration requires a DirectX10 graphics card and a 1280 x 1024 or higher resolution monitor
  - Network: 100MB/Sec

</tbody>
</table>

**Notes**
* In general, AspenTech aspenONE® software license agreements with customers permit use of the licensed software on Supported Computers at customer Sites. “Supported Computers” include computers with a manufacture, model and operating system for which AspenTech offers a supported version of the software, and that are controlled by the customer. “Sites” are customer facilities or locations specified in the license agreement.

AspenTech permits customer use of licensed aspenONE software in the cloud where: (i) the Platform Support specifications published by AspenTech for the relevant version of the software product include cloud support; (ii) only the customer has access to the licensed software hosted by the cloud service provider; and (iii) the user is accessing the software only from a Site specified in the applicable license agreement.

Cloud deployment does not change any license restrictions, including the restrictions on which regions can access the software.

When running software on a virtual machine, the machine should meet the same requirements.

AspenTech does not support the in-place upgrade of the Operating System (for example: upgrade Windows 7 to Windows 10) with AspenTech software already installed. Our recommendation is to uninstall Aspen Software before upgrading the OS and reinstall it after the upgrade.

Your Aspen SLM Server must be installed and running prior to installing any V11 product.

If running standalone, 1280 x 800 is the minimum recommended resolution monitor for servers.

For SLM server using the Type 1 Desktop configuration, the minimum memory is 4GB with 20GB hard drive.

Microsoft Active Directory/Domain Services (Required for aspenONE Web Server)

This configuration is only practical for small scale models and deployments. For most applications, best deployment practice dictates the use of a separate and dedicated database server for EDR does not use any database servers. Deploys its own LocalDB database files.
Suite

3. Aspen Batch Process Developer does not support the 64-bit version of Visio. Visio is used in ABPD to generate the block diagram and process flow diagram reports; it is an optional feature. The 64-bit versions of Word and Excel are fully supported by ABPD.

4. When Aspen Utility model is driven by Aspen Online using Local System Account, then SQL Express 2014 is required.

5. When Exchanger Design and Rating is driven by Aspen Online using Local System Account, then SQL Express 2014 is required.

7. Oracle Java is needed if the 3rd party scheduling application Primavera is used with Economic Evaluation (EE). Primavera is owned by Oracle and its API uses Java.

8. Must be in compatibility mode for Aspen Process Sequencer.

10. For new installations of APC Web Server, install IIS and JRE before installing APC Web Server.

11. CIM-IO Interfaces can be installed on 32-bit desktops.

12. This configuration is only practical for small scale models and deployments. For most applications, best deployment practice dictates the use of a separate and dedicated database server for acceptable performance.

13. Refer to KB 47648 For more information on configuring SCM products using Azure:

14. Oracle Database 12.1.0.2 is supported for Collaborative Forecasting, not 12.2.x.

15. ASCC web applications and the Informatica client will work only with MS Office 32-bit. Informatica Server uses 64-bit Office only.

16. Non-English OS's are not supported.

</tbody>
</table>

17. If using IBM Maximo Adapter

18. If using AspenONE Exchange on Windows Server 2012 R2, you must select the Desktop Experience option during Windows installation to enable Flash training videos.

19. SLM supported in cloud (Azure VM/Amazon VM) for ENG products that are supported in the cloud

20. If FIPS is enabled, AspenONE Exchange users must have the latest Windows Update patches installed on their machine.

21. Office 365 - 32-bit support only

22. Requires the latest patches of the corresponding AspenTech software

23. WVD Certification Notes –
   1. Publishing WVD apps to users local machine start menu not supported
   2. Interoperability with 3rd party products only supported with Office 365
   3. Aspen Properties Enterprise Database (APED) via SQL Server not supported
   4. The following products have not been certified for WVD: ABE, APD, ACL, AVCA

24. APEM does not support CDB-PDB database in Oracle 12.2.

25. Weigh & Dispense Client 32-bit does not support Oracle

26. APP-V is only supported with Process Explorer

27. When you have more than 8 simultaneous users, the recommendation is 2CPU's and 4GB RAM per user. Performance will vary based on product and usage profiles. This can be considered a starting point for large multi-user machines.
