

 Brochure

Aspen Unified™

Overview

Aspen Unified is the next-generation planning, scheduling and yield accounting solution from AspenTech, the creators of the world's leading planning and scheduling solutions—Aspen PIMS-AO™ and Aspen Petroleum Scheduler™. Aspen Unified enables companies to increase margins and save time by coordinating siloed business processes for better efficiency across the value chain.

AspenTech's Production Optimization Solution brings many disparate processes together to reduce the gap created by inefficiencies in implementing optimal plans. Aspen Unified is the environment to leverage digitalization in your company, bringing technologies together to improve business results. AspenTech offers many industry-leading technologies, including advanced process control in Aspen DMC3™, dynamic optimization technology in Aspen GDOT™, predictive maintenance in Aspen Mtell®, and artificial intelligence (AI)/first principles hybrid models for process simulation in Aspen HYSYS®. Aspen Unified Reconciliation and Accounting™ (AURA) brings fast and efficient simultaneous mass and volume balance to Unified, helping reduce material losses and increase margins to further close the gap between planning and actual operations.

Challenge

Solution

Siloed Systems and People Can Result in Lost Opportunities

Miscommunication between different groups in the plant, such as planners, schedulers and operators, can lead to errors resulting in margin leakage. Different models and data sources can provide different answers, or require significant manual rework to align.

Solution: *Aspen Unified simplifies these problems by combining models and data into one source.*

- Production planning and scheduling can use the same master data (e.g., stream names or properties), submodels (e.g., reactor yields) and assay data.
- Aspen Unified can synchronize real time with plant data historians and constraints in the APC/GDOT system to ensure that planning and scheduling take into account real conditions in the plant.
- Easier collaboration in a web-based environment

Need for Intuitive User Interface and Workflows

The leading planning solutions from AspenTech, Aspen PIMS and Aspen PIMS-AO, are among the most established tools in the refining and petrochemical industries—but with this tenure, comes an aging interface. With the prevalence of digital technology, everyone expects software to be easy to use and understand, with minimal training to be effective.

Solution: *Aspen Unified combines an intuitive user interface, modern web-based architecture and data visualization tools for more efficient and powerful analysis.*

- Faster to learn and train new users—expected savings of at least one staff-week per new user trained
- Manage cases more intuitively—drag and drop, parent-child, copy/paste and automated case set creation
- Better understanding of the results through flowsheet and quick data visualization in Unified

Challenge

Models are Difficult to Update and Maintain

As plant operations change over time and conditions shift, models need to be updated to stay accurate. Since planning models are used to make critical business decisions, their accuracy is paramount.

Solution

Solution: *Aspen Unified simplifies these problems by combining models and data into one source.*

- Production planning and scheduling can use the same master data (e.g., stream names or properties), submodels (e.g., reactor yields) and assay data
- Hybrid models combine first principles with AI to ensure higher accuracy
- Aspen Unified can synchronize real time with plant data historians and constraints in the APC/GDOT system to ensure that planning and scheduling consider real conditions in the plant
- Leverage validated and reconciled data to make better planning and scheduling decisions

Technological Advances are Currently Untapped

With high-performance computing, planning can be transformed into a big data exercise. Running hundreds or thousands of cases in a reasonable timeframe is now possible.

Solution: *Aspen Unified PIMS uses the latest hardware to deliver unmatched speed and allows you to keep working while the model solves.*

- Cloud computing provides dramatically faster performance
- Work while cases run, allowing for real-time interaction with the results and better data analysis

Increase Profits and Reduce Carbon Emissions through Collaboration

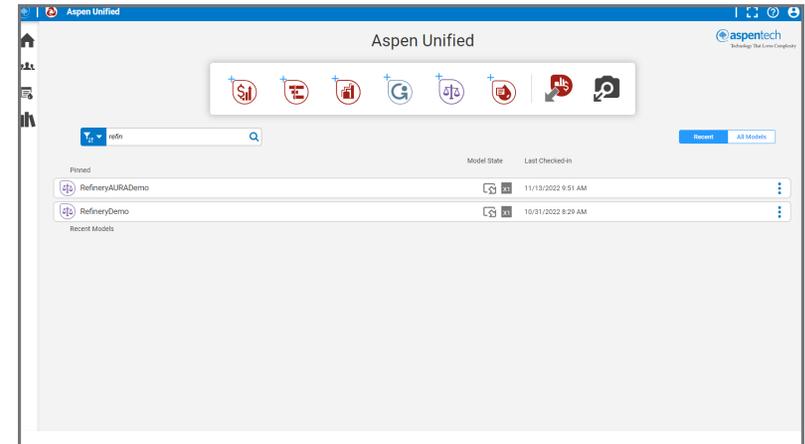

Technology: Aspen Unified™

Capabilities

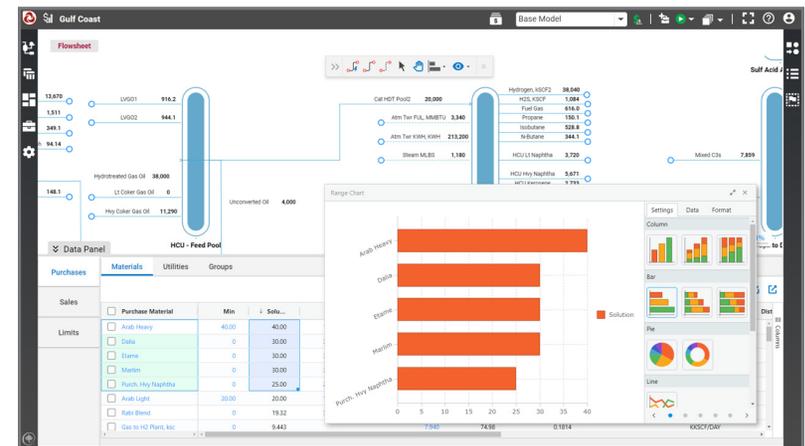

- AspenTech's proprietary solver for complex refinery and chemical process problems is consistently proven more robust and reliable than any other commercially available solver (such as FICO XSLP)¹
- Simplified user interface helps new users learn the tool faster than ever
- Multi-user enterprise environment improves security and change tracking of business-critical, economic decision-making data
- Dynamic reports, which automatically update with new results, are shareable with others via a quick URL link
- Common data and model library streamlines model updates and prevents costly errors
- Cloud deployment options—on-prem, virtual private cloud, or hybrid
- Web client enables faster deployment and upgrades
- No local client software to install and maintain
- Online training “eLearning” with official certification programs and exams

Benefits

- Solve up to 100 times faster with cloud-enabled parallel processing
- Save deployment time and money with easy adoption and model migration
- Analyze more scenarios and solve problems faster with blazing speed
- Save time training new users—get them up to speed twice as fast
- Enable better business results
- Save time and money on software deployment and upgrades with centralized infrastructure and automated model migration

Notes: ¹ AspenTech regularly evaluates the best commercial and academic non-linear solvers to see how they compare to the AspenTech proprietary non-linear solver

Production Planning

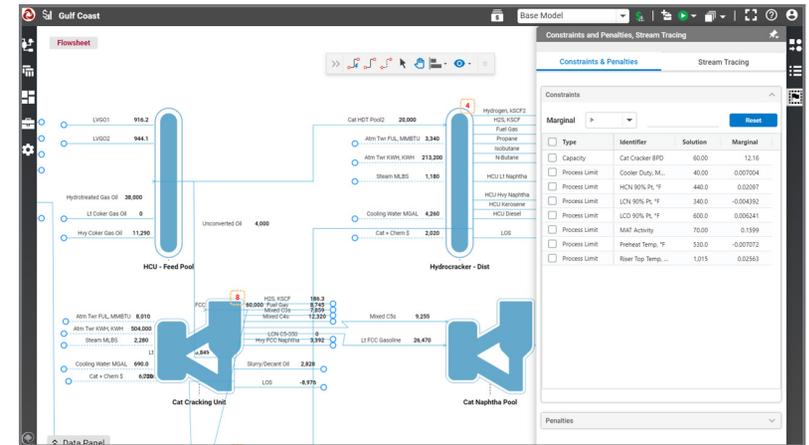

Technology: Aspen Unified PIMS™

Capabilities

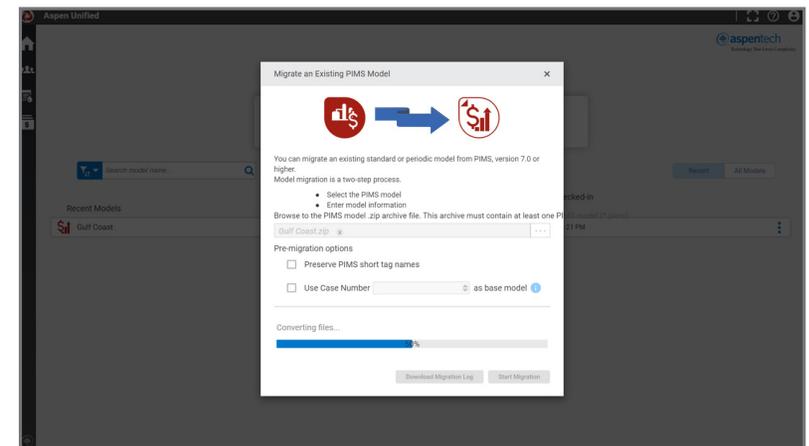

- Flowsheet interface to build, edit, visualize, and understand your planning model and results
- Automatic pricing and sensitivity analysis tools create cases for you
- Streamlined model management workflow including check in/out, live sharing, change tracking
- Visualize results quickly by showing constraints and results with contextual “select, right-click and graph”
- Easy plug-and-play integration with business intelligence tools such as Microsoft Power BI
- Automatically import and convert your existing PIMS-AO model to Aspen Unified PIMS
- Set up automatic data imports such as prices or inventories from third-party sources via flexible web APIs

Benefits

- Enable better business decisions with the proprietary AspenTech solver
- Increase margins significantly²
- Save time each day with automation tools
- Solve up to 100 times faster with cloud-enabled parallel processing

Production Scheduling

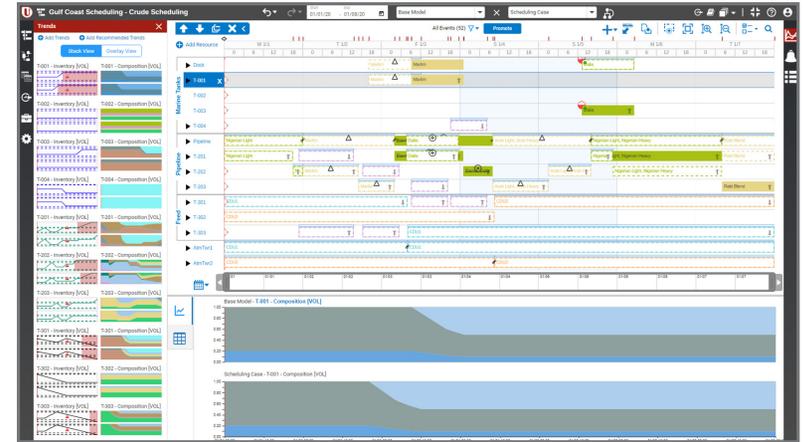

Technology: Aspen Unified Scheduling™

Capabilities

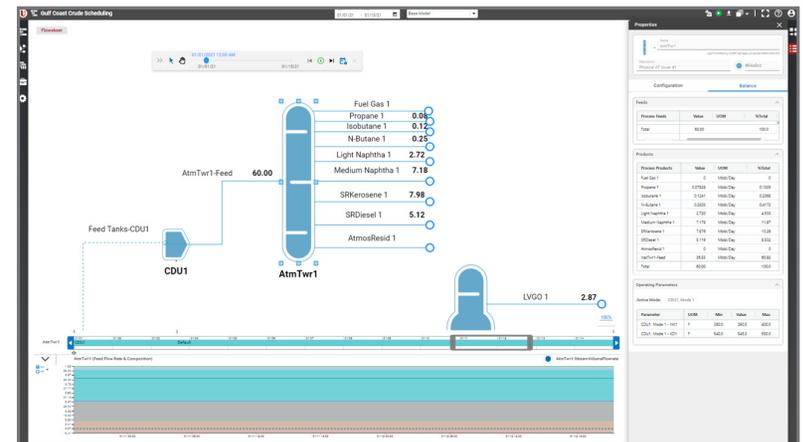

- Enable collaboration across teams with true multi-user scheduling solution
- Schedule the entire refinery and off-sites including process units, crude and product tanks, pipelines and more
- Visualize the schedule in a new and improved Gantt chart and flowsheet
- Import the plans directly from Unified PIMS and easily share the schedule results to Data Lakes, Power BI, and other tools
- Automatically create a new feasible crude schedule while respecting piping and inventory constraints—**now infused with AI learning from schedule history to initialize the schedule**
- Automatically reconcile yesterday's schedule with plant data
- Create logic to automate scheduling tasks—now with a fully customizable interface
- Take advantage of full refinery scheduling (also known as process unit scheduling) now available in Unified

Benefits

- Save time with automated reconciliation and AI-based crude schedule optimization
- Increase margins up to 3%²
- Create more stable refinery operations by reducing changes
- Implement quickly and easily, using your Unified PIMS model as a starter

Production Accounting

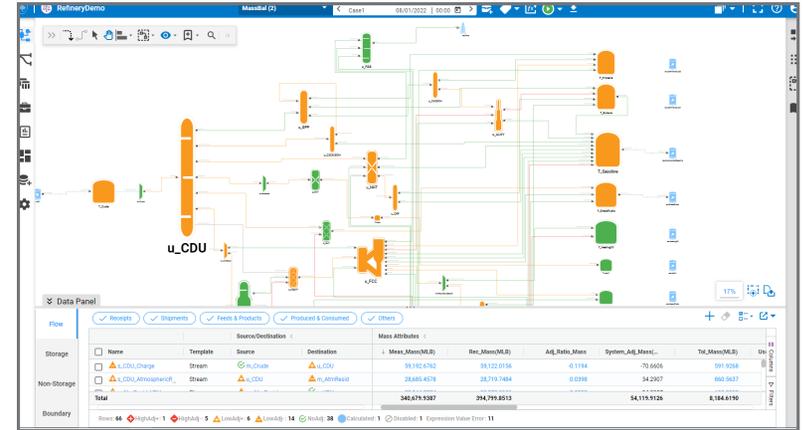

Technology: Aspen Unified Reconciliation and Accounting™

Capabilities

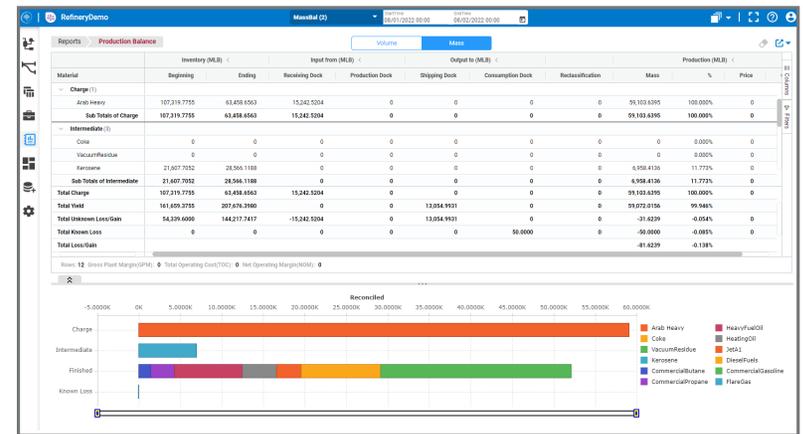

- Complete tasks more easily with intuitive workflows, close the balance faster with the cutting-edge Smart Solver and easily interpret results with advanced visualization and powerful dynamic reports
- The cutting-edge Smart Solver's simultaneous mass and volume balance automatically resolves lab-measured density errors to increase reconciliation accuracy while lowering sampling costs
- Automate CO₂ emissions data collection and aggregation from multiple sources for compliance and reporting

Benefits

- Close the balance quicker and more accurately with the intuitive Workflows, Smart Solver and powerful analysis and reporting capabilities
- Empower key stakeholders to make better decisions based on validated and reconciled production data
- Save deployment time and effort during model implementation and maintenance with a library of standard objects and calculations, and the streamlined AORA-to-AURA migration tool

Now Available: Chevron Assay Database

Technology: Aspen Assay Manager with Partner Equinox Software and Services Pvt. Ltd.

Capabilities

- Over 1000 unique crudes with over 2800 assays and over 60 physical and chemical properties
- All major globally traded crudes are represented by multiple assays
- Updated regularly
- Contact your Aspen Sales representative for more information

Benefits

- Increase planning model accuracy with more accurate assays
- Select better crudes for higher refining margin
- Analyze new crudes for spot opportunities
- Value crudes more accurately for trading

Verify Plan Results with Artificial Intelligence (AI)

Technology: Aspen Verify for Planning™

Capabilities

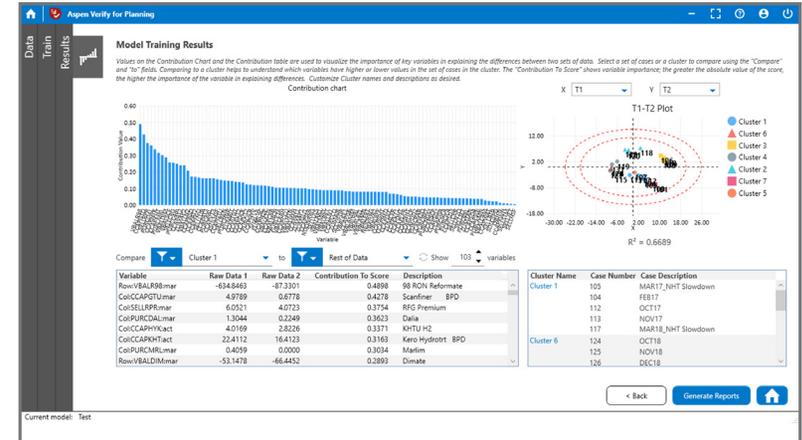

- Analyze historical plan results with AI algorithms to create clusters of data to better understand results and thus make better business decisions
- Rank variables by impact on the profitability of the plan to focus your time investigating what impacts the plan most

Benefits

- Help new planners and plan reviewers (such as operations and technical management) to understand the plan and see how it compares to history
- Identify discrepancies to prevent costly mistakes in the plan, saving approximately \$1–3M per year²
- Save time reviewing the plan—approximately 4 hours per week for a planner and 1 hour per month for each plan reviewer

Aspen Verify

Expected Benefits of Aspen Unified

Increase margins significantly

- Align plan, schedule and execution
- Enable agile and robust decision making
- Prevent errors by sharing data seamlessly
- Enable more profitable integration between refining and chemicals units
- Allow companies without scheduling models to adopt scheduling easily by leveraging existing planning models. Quick adoption enables vast benefits such as higher margins, more stable operations and better response to unplanned events (e.g., shutdowns)

Save up to 1000 staff-hours per year so your teams can add more value to your business

- Save up to 200 staff-hours per year by reducing time and effort on model maintenance and management with new and improved workflows
- Save up to 1000 staff-hours per year per scheduler by automating data reconciliation and first-pass feasible schedule creation to save up to 5 hours per day
- Train new users much faster, saving at least 40 staff-hours per new user

Reduce total cost of ownership (hardware cost) up to 75%

- Deploy on a server or in a public or private cloud: typically 25-50% less expensive than powerful desktop computers
- Lower hardware costs with a device- and platform-agnostic solution
- Save IT cost on software upgrades using cloud or server installation

About AspenTech

Aspen Technology, Inc. (NASDAQ: AZPN) is a global software leader helping industries at the forefront of the world's dual challenge meet the increasing demand for resources from a rapidly growing population in a profitable and sustainable manner. AspenTech solutions address complex environments where it is critical to optimize the asset design, operation and maintenance lifecycle. Through our unique combination of deep domain expertise and innovation, customers in capital-intensive industries can run their assets safer, greener, longer and faster to improve their operational excellence.
